DESCRIPTION

The HEF4021B is an 8-bit static shift register (parallel-to-serial converter) with a synchronous serial data input (D_S), a clock input (CP), an asynchronous active HIGH parallel load input (PL), eight asynchronous parallel data inputs (P_0 to P_7) and buffered parallel outputs from the last three stages (O_5 to O_7).

Each register stage is a D-type master-slave flip-flop with a set direct/clear direct input. Information on P_0 to P_7 is asynchronously loaded into the register while PL is HIGH, independent of CP and DS. When PL is LOW, data on D_S is shifted into the first register position and all the data in the register is shifted one position to the right on the LOW to HIGH transition of CP. Schmitt-trigger action in the clock input makes the circuit highly tolerant to slower clock rise and fall times.

PINNING

- PL parallel load input
- P_0 to P_7 parallel data inputs
- D_S serial data input
- CP clock input (LOW to HIGH edge-triggered)
- O_5 to O_7 buffered parallel outputs from the last three stages

Parallel operation

n	INPUTS			OUTPUTS		
	CP	D _S	PL	O ₅	O ₆	O ₇
	X	X	H	P ₅	P ₆	P ₇

Notes

1. H = HIGH state (the more positive voltage)
L = LOW state (the less positive voltage)
X = state is immaterial
 = positive-going transition
 = negative-going transition
D_n = either HIGH or LOW
n = number of clock pulse transitions
